

LUPAFIX

SISTEMI DI ANCORAGGIO LUPAK METAL

Lupafix is a patented anchoring system for all Lupak Metal EVB, cord and chain. We like to call it 'the secret ingredient', thanks to which we achieve the perfect installation. It is useful to improve the anchorage, aesthetics, and performances of all Lupak Metal EVB.

It guarantees a stable fixation surface over time and high wind resistance.

It is equipped with a telescopic system for side rail adjustment, it can be powder coated and offers a unique system of cover box.

A very simple but cleverly designed structural element that keeps the entire EVB aligned.

Versatile and easy to install, Lupafix is recommended for renovations, new buildings, ventilated façades, preparation for thermal insulation

The advantages

- 1 Stable fixation surface over time
- 2 High wind resistance
- 3 Improved blackout thanks to the continuous fixation profile
- 4 Telescopic system for side rail adjustment
- 5 No need of threshold thanks to the stainless-steel caps
- 6 Possibility of powder-coating in the same colour of the EVB or the façade.
